

AbstractSub  
A1>

The invention relates to a solenoid valve having a valve housing, an electromagnet, which has a coil, a yoke and a clapper armature, and having at least a first valve seat and a sealing element which can be actuated by the clapper armature and which co-operates with the first valve seat. The yoke has yoke pins and the clapper armature is arranged on a yoke pin at the end thereof that is remote from the sealing element.
